

ISY Bus Security Support Plan 2018-2019 Appendix 7

ISY School Bus Security Plan

Overview

In 2017, to address the traffic situation near ISY and to address parental concerns, ISY began providing school bussing services to the ISY community. Our current school bus vendor, SMART Technical Services, currently provides 5 left hand drive, 22 passenger vans in support of the ISY bussing program.

In order to ensure the safety of ISY students participating in the ISY bussing program, ISY has implemented the following safety and security measures.

Bus Security

- Bus monitors are assigned to each school bus for the purpose of supervision and communication
- ISY Security inspects school busses daily, at arrival and prior to departure from the ISY campus
- School busses are equipped with seat belts
- School busses are equipped with first aid kits and fire extinguishers
- School busses are equipped with in-bus video surveillance cameras
- Bus Monitors and Drivers have been vetted and advised of ISY's Child Protection Policy
- ISY Security maintains a roster of students assigned to each bus

Route Security

For student safety, ISY Security monitors the transportation of students to and from ISY along the pre-designated routes. This enables ISY Security to note security concerns and help address security related issues with the ISY bussing program.

- Each bus monitor is issued an ISY owned "smart phone".
 - The ISY Bus Coordinator will ensure that all the phones have sufficient credits
- Each ISY owned "smart phone" is identified by school bus letter.
- Each "smart phone" is pre-loaded with a secure travel security application called Traveler Secure (www.travelersecure.com).
 - The ISY Bus Coordinator will ensure that the bus monitors are familiar with the Traveler Secure system and understand check-in requirements.
- Each school bus will be reflected in the Travelers Secure System under an ISY account and by bus letter. This will facilitate easy tracking.
- Traveler Secure is a travel security system that connects travelers through a phone application (iOS or Android) to a web-based map/dashboard that can be monitored by managers and/or security personnel. This is the same system utilized for the ISY Travel Security Support Program.
- Traveler Secure is provided to International Schools at no cost.

- The application allows for non-verbal check-ins that are automatically logged by date, time, and location.
- Security personnel and/or managers can receive email notifications of check-ins on a pre-determined schedule.
- ISY Security can monitor ISY bus transportation in near real time.
- The application will also notify security personnel and/or managers if travelers move outside an authorized travel area. (Geo-Fencing)
- The application is configured with a non-verbal emergency notification system that will notify emergency contacts/managers/security personnel and provide real-time location information.
