

Technology Integration: Strategic Objectives

Theme Statement: **Technology Integration** will be a focus of our curriculum and program development, as well as our campus infrastructure development, with an emphasis on innovation.

Strategic Objectives

1. Ensure all classes, PK - 12, have the capacity to use technology to support learning.
2. Incorporate technology to support inclusive and innovative instructional strategies, service learning, and environmental awareness.
3. Develop the technology infrastructure to support the current ISY population as well as the anticipated growth in the future.
4. Develop a clearly articulated PK-12 technology curriculum ensuring our graduates are at, or above, their peers in their use of technology to support learning when they go to university.
5. Ensure faculty / staff are in place to adequately support the technology program.

Measurements

1. A technology integration plan is in place within one year.
2. An annual infrastructure audit reflects progress toward the theme.
3. By the end of five years, technology has been integrated into all curricular documents.
4. Within one year a professional development plan has been developed indicating technology and innovative practices are in place.
5. Within three years an external measurement indicates graduates of ISY are at, or above, their peers in their use of technology to support learning when they go to university.
